APK:

This software build using React Native Frame work on Expo environment and Yarn Package Manager. To maintain on air update Expo Application Service was used. Yarn used over npm because of performance and better dependencies maintain.

DEVICES AND SOFTWARE VERSIONS: (TESTED)

GOOGLE PIXEL 6 PRO (EMULATOR), ANDROID 12

IPHONE 12 (EMULATOR AND ON DEVICE), IOS17 & IOS18

FEATURE & ADVANTAGE: (BY USING EXPO)

- * Available for both device and ready to deploy.
- * On Air update available for both Play Store and Apps Store.
- * Consistency was maintained through development to match iOS and Android Design.
- * App Size little high due to expo layer. (Bare minimum, with great performance)
- * Fast development and easier dependency injection.

COMPROMISES: (ORIGINAL DESIGN)

- * Use of alike icon due to icon wasn't provided.
- * Didn't add flag and active dot on the profile.
- * Didn't used irregular shape for chat container to keep the project less redundant.
(React Native Svg package should be used)
- * Didn't add result card on the news page. (Similar as match card or game page so skipped).

EXTRA FEATURES:

- * Redux Toolkit for State Management.
- * React Navigation 6 for smooth Navigation.
- * Expo fonts and icons for Beautiful Design.
- * React Tab Navigator for Tab Navigation.
- * Enable Screen for smooth transition between page.
- * Pixel to Pixel perfect design for both android and iOS.

WORK TIME : (30 HOURS)

- * Redux Toolkit for State Manage

SUGGESTION : (FOR BETTER EFFICIENCY)

- * UX and UI collaboration and resource sharing would improve efficiency a lot.
- * Font should be provided with the figma file.
- * Icons should be used from a particular library for better optimisation. (Like expo font or react-font)
- * Dimensioning with the closed or wrapped object instead of top will make implementation the design very easy.

STRUCTURE OF SOURCE CODE:

.expo

-device.json (Tested device list)

Assets

-font (Contain all font used on production)

-images (Contain all image got used on production)

Module

-Components (All component got used on pages)

-Constants (Colours and Dummy Data used for static rendering)

-Pages (Contain all 3 pages)

Navigator

-myNavigator (Contain header and footer for each page and create navigation between them)

Redux

-action (Provide a function to dispatch)

-reducer (Change the state using dispatch)

-store (Create a store with the state)

App.js (Main function we import front and wraps all pages with store here)

Package.json (All dependencies listed here)

DEPENDENCY: (INSTALL THIS TO RUN THE CODE)

```
"dependencies"

"@expo/vector-icons": "^14.0.4",
"@react-navigation/bottom-tabs": "^7.1.2",
"@react-navigation/native": "^7.0.12",
"@reduxjs/toolkit": "^2.4.0",
"expo": "52.0.14",
"expo-font": "^13.0.1",
"expo-linear-gradient": "^14.0.1",
"expo-status-bar": "~2.0.0",
"react": "18.3.1",
"react-native": "0.76.3",
"react-native-gesture-handler": "2.20.2",
"react-native-reanimated": "^3.16.3",
"react-native-safe-area-context": "4.12.0",
"react-native-screens": "4.1.0",
"react-redux": "^9.1.2"
},
```

**NOTE: (DESIGN CAN VARY IF LARGE FONT IS USED ON SMALLER
DEVICE SIZE)**
